

Jane Houlihan, Vice President for Research, Environmental Working Group

Ms Houlihan directs research operations at the Environmental Working Group in Washington, DC, focusing on human health and environmental exposures with an emphasis on risks to infants and young children. With others, she has authored over 20 major studies on potential health impacts of industrial chemicals, some leading to important policy changes. Ms. Houlihan serves as an expert for the environmental and public health community on national television and in national print media. She has appeared on such shows as 20/20, network nightly news and morning shows, and The NewsHour with Jim Lehrer, and in such publications as *The New York Times* and *The Washington Post*. Her areas of specialty at EWG include the human body burden of toxic chemicals, and health implications from exposures to toxics in drinking water, food, cosmetics, and other common consumer products. Prior to joining EWG, she spent ten years in practice as an environmental engineer, studying pollution at Superfund sites and designing remedies to protect the environment and human health.
