

Learning and Developmental Disabilities Initiative

[of the Collaborative on Health and the Environment](#)

Biweekly Bulletin August 10, 2011

This bulletin lists upcoming events plus recent announcements, news and journal articles, calls for proposals and other items related to learning and developmental disabilities and environmental health. They are archived and searchable on LDDI's website:
www.healthandenvironment.org/working_groups/learning/r/bulletins

LDDI Highlights

AAIDD Webinar September 20th

In this webinar titled "Screening for Developmental Neurotoxicity: An In Vitro Approach Using High Content Imaging", Dr. William Mundy will explain EPA's exciting efforts to speed up testing of possible developmental neurotoxicants. Reserve a space in this webinar, open to the public, at <https://www2.gotomeeting.com/register/899050586>.

Announcements

*A daily news feed with articles and announcements is available on CHE's website:
<http://www.healthandenvironment.org/news/announce>.*

Intensive training program opportunity from the Community-Based Research Infrastructure to Better Science project.

The face-to-face training for both newly forming and experienced collaborative community-academic research partnerships will be held in Northern California five weekends (one per month) from January through May 2012. The application deadline is September 30, 2011.

Call for comments: Chlorpyrifos Preliminary Human Health Assessment for Registration Review.

As part of the registration review process, the Agency has completed a comprehensive preliminary human health risk assessment for all chlorpyrifos uses. Written comments on this proposed rule must be received by September 6, 2011.

[See a related announcement: [Call for comments: Registration Review of Chlorpyrifos](#)]

Call for comments: Secondary National Ambient Air Quality Standards for Oxides of Nitrogen and Sulfur.

Written comments on this proposed rule must be received by September 30, 2011.

APHA launches Public Health Newswire.

The American Public Health Association (APHA) recently launched Public Health Newswire, a portal for public health news, opinion and exchange.

Protect Your Groundwater Day, September 13th.

On Protect Your Groundwater Day, the National Ground Water Association urges you to ACT. Use this day to begin doing your part for protecting one of our most important natural resources -groundwater.

National Day of Action--Stroller Brigade, August 10th.

Friendly stroller brigades will be taking place from coast to coast to ask our Senators for

their support for taking action on toxic chemicals found in our homes and products.

EPA releases draft policy for ensuring scientific integrity / agency seeking public comment.

The draft policy reflects the Obama Administration's commitment to the ethical standards and transparency necessary for ensuring the highest quality science. Comments on this draft policy should be sent to osa.staff@epa.gov by September 6, 2011.

EPA publishes rule to improve reporting of chemical information.

The U.S. Environmental Protection Agency is increasing the type and amount of information it collects on commercial chemicals from chemical manufacturers, allowing the Agency to better identify and manage potential risks to Americans' health and the environment.

[See other articles about chemical oversight: [EPA awards contracts to U.S. companies to screen chemicals for human health impacts](#) and [A signal-to-noise crossover dose as the point of departure for health risk assessment](#)]

EPA proposes air pollution standards for oil and gas production.

These proposed updated standards - which are being issued in response to a court order - would rely on cost-effective existing technologies to reduce emissions that contribute to smog pollution and can cause cancer while supporting the administration's priority of continuing to expand safe and responsible domestic oil and gas production.

[See another announcement regarding air quality: [President Obama announces historic 54.5 mpg fuel efficiency standard](#)]

EPA Student Diversity Intern Program.

Numerous opportunities are available within EPA for students to gain valuable work experience while contributing to the mission of protecting human health and safeguarding the environment. The submission deadline is August 19, 2011.

Job opening: Portland, Oregon.

The planning committee for the 4th Annual Northwest Environmental Health Conference is currently seeking a part-time volunteer to work as a Support and Coordination Intern for the 4th Annual Northwest Environmental Health Conference to be held in February 2012. Applications are due August 15, 2011.

Job opening: Seattle, Washington.

The Puget Sound Clean Air Agency currently has openings for an engineer and an environmental justice coordinator. Applications are due August 15th and 26th, respectively.

Upcoming Events

Online Calendar. These and more upcoming events are listed in a searchable calendar: <http://www.healthandenvironment.org/cgi-bin/searchevents.cgi> The calendar now lists deadlines for funding proposals and conference abstracts.

1) How to Bring About Large-scale Behavior Change

Two remaining parts, both held on Saturdays: August 13 and September 10, 2011
10:00 a.m. - 2:00 p.m.
Seattle, Washington
at the Seattle Public Library main branch, Wright-Ketcham meeting room

Sponsor: Sustainable Seattle

One of the most confounding challenges facing the sustainability movement is how to bring about a massive shift in human behavior. This master class series explores a variety of powerful insights from cognitive science for developing successful social change strategies. You'll learn how meaning arises in the workings of the human brain,

why emotions are absolutely vital for engaging people in a process of persistent change, and what the root causes are that have driven societal institutions to the edge of ecological collapse. Participants will explore the evolutionary origins of morality and discover the psychological foundations of identity that merge values, ideology, and institutions into the powerful stories we collectively live in the modern world. Techniques will be provided to begin using this knowledge to communicate effectively, increase civic engagement, and design better structures for bringing about large-scale behavioral change. Participants can register for the entire series or individual sessions.

Price: see the website

[Visit the website](#)

2) 2011 Environmental Justice Conference: One Community-One Environment

Tuesday through Friday, August 23 - 26, 2011 (August 23 is an optional training day)
Detroit, Michigan

Sponsor: Co-sponsored by the United States Environmental Protection Agency (EPA); and EPA's Offices of Air and Radiation (OAR), Water (OW), Solid Waste and Emergency Response (OSWER), and Research and Development (ORD); the National Institute of Environmental Health Sciences (NIEHS); and Greendoor Initiative

Conference participants can learn about the following: 1) models for effective community engagement and capacity building; 2) strategies for addressing pollution sources that impact EJ communities; 3) federal interagency working group on EJ; 4) workforce development training and job creation; 5) updates: federal agencies' priorities for EJ; 6) hands-on demonstrations of tools and resources; and 7) funding opportunities.

Price: unknown

[Visit the website](#)

Contact: Lena (Vickey) Epps-Price, 919-541-5573 or epps-price.lena@epa.gov

3) Symposium on Ethics of Environmental Health

Wednesday through Saturday, August 24 - 27, 2011
Prague, The Czech Republic
at the Courtyard by Marriott Prague Flora

Sponsor: The Society of Radiation Research and Emergency Planning in the Czech Medical Association

This first Symposium on Ethics of Environmental Health will address highly topical issues at the intersection of radiation protection, toxicology, ecology, medicine, risk ethics and bioethics.

Price: around 480 EUR

[Visit the website](#)

Contact: see the [Contact page](#)

4) Epi Info™ 7 Webinar Demonstrations

three dates from August 25 - September 27, 2011

Sponsor: US Centers for Disease Control and Prevention

Epi Info™ 7, scheduled for release in fall 2011, represents a complete technology overhaul of the Epi Info platform. The Epi Info™ development team invites interested public health professionals who work with epidemiological data to attend one of these upcoming LiveMeeting webinars.

Price: free

[Visit the website](#)

Contact: Sara Bedrosian, eri7@cdc.gov

5) Public Health International Conference 2011

Thursday and Friday, September 8 - 9, 2011
London, United Kingdom
at Friends House, 173-177 Euston Road

Sponsor: *Public Health Journal*

Taking as its theme health and well being, the conference will explore the relationships between health, well being and the factors which influence them in a global environment.

Price: see the [Booking form](#)

[Visit the website](#)

Contact: Claire Robins, crobins@rsph.org.uk

News and Journal Articles

Increase in public health spending results in healthier people, study suggests.

Tuesday, August 09, 2011

A groundbreaking new study published in the journal *Health Affairs*, suggests that increases in public health spending result in healthier people, especially in communities with fewer resources. *ScienceDaily*.

Temporal changes in the levels of perfluorinated compounds in California women's serum over the past 50 years.

Tuesday, August 09, 2011

Serum samples collected from California women at different time periods: 1960s (n = 40), 1980s (n = 30), and 2009 (n = 35) were examined for the presence of 12 perfluorinated compounds (PFCs). *Environmental Science & Technology*.

[See a related article: [Retrospective exposure estimation and predicted versus observed serum perfluorooctanoic acid concentrations for participants in the C8 Health Project](#)]

UN slams Shell as Nigeria needs biggest ever oil clean-up.

Friday, August 05, 2011

A U.N. report has criticized Shell and the Nigerian government for contributing to 50 years of pollution in a region of the Niger Delta which it says needs the world's largest ever oil clean-up, costing an initial \$1 billion and taking up to 30 years. *Reuters*. One tainted water well, and concern there may be more.

Thursday, August 04, 2011

For decades, oil and gas industry executives as well as regulators have maintained that a drilling technique known as hydraulic fracturing has never contaminated underground drinking water. But there is in fact a documented case, and an EPA report suggests there may be more. *New York Times*. [See a related article: [Environmental groups press EPA on fracking fluid](#)]

[Reconnecting children and nature.](#)

Thursday, August 04, 2011

What happens when children fail to bond with nature? Researchers believe the disconnect contributes to ADD, childhood obesity, higher rates of physical and emotional illness, vitamin D deficiency, and a weakening of the necessity they will feel for environmental stewardship when they grow up. Miller-McCune.

[New sensor seen as tool to detect manganese.](#)

Thursday, August 04, 2011

"We demonstrated we can do a measurement of manganese, lead and cadmium and we can use a single sample-a drop of blood-and do a measurement of all three metals on the same sample," he said. Marietta Times, Ohio.

[How safe is your soil?](#)

Thursday, August 04, 2011

As backyard gardening and urban farming continues to explode in popularity, many may be ignorant of the fact that urban topsoil, particularly throughout the East Bay flatlands, contains a cocktail of heavy metal pollutants that can be consumed by humans and pets through contaminated plants and soil dust. Lead, in particular, is virtually ubiquitous. There's little consensus on what to do about it. East Bay Express, California. [See a related article: [West Oakland's innovative approach to soil decontamination](#)]

[Dangers of household chemicals probed.](#)

Thursday, August 04, 2011

Research into possible links between household chemicals and diseases such as ADHD, asthma and obesity in children is set to begin in Brisbane. NineMSN.com. Increased risk of Parkinson's disease in methamphetamine users, study finds.

Monday, August 01, 2011

People who abused methamphetamine or other amphetamine-like stimulants were more likely to develop Parkinson's disease than those who did not, in a new study from the Centre for Addiction and Mental Health (CAMH). ScienceDaily.

Day camp helps children recovering from lead poisoning.

Monday, August 01, 2011

Little Plumbs, a day camp pilot project in Fort Wayne, is helping preschool children overcome developmental and neurological effects of high lead levels in their blood. Fort Wayne News-Sentinel, Indiana. [See other articles about lead exposures: [High lead levels in baked clay eaten during pregnancy](#); [Blood tests for lead exposure 'needless'](#); [Lieu seeks state EPA investigation of high levels of lead at airport](#); [Get the lead out: Millions in damages for lead poisoning](#); [DEC plans costly cleanup](#) and [Tibetans in Amdo suffer lead exposure from Chinese factories](#)]

Cashiers sought for health study.

Monday, August 01, 2011

Researchers at the National Institute of Environmental Health Sciences are recruiting cashiers willing to have blood and urine samples taken to be tested for a potentially toxic chemical - bisphenol A, or BPA for short - that is used to manufacture the slick receipt paper many cashiers handle on a daily basis. Raleigh News & Observer, North Carolina.

A study in balance: how microbiomes are changing the shape of environmental health.

Monday, August 01, 2011

This field of study has taken an evolutionary leap forward with new research showing human microbiomes may play a far greater role in environmental health than ever imagined. Environmental Health Perspectives.

Autism risks: genes may not play biggest role.

Sunday, July 31, 2011

As many as one in 80 American children are thought to be autistic, and most scientists trace the main risk factor to genetics. But now, researchers believe that environmental factors could play as big a role as genetics. The largest study of autism in twins ever conducted found, to the surprise of researchers, an unusually high number of fraternal twins with autism. All Things Considered, NPR. [See other articles about autism: [Australian research finds autism risk](#) and ['Environment' poses a knotty challenge in autism](#)]

Dr. Michael Hendryx, measuring mining's toll on health.

Sunday, July 31, 2011

After years of neglect, health complaints from coal country are finally being investigated, thanks largely to one man. And his startling findings about cancer, birth defects and more are striking a nerve. Living On Earth.

The new dirt on dry cleaners.

Sunday, July 31, 2011

A breakup is coming to an industry that has changed little for decades. Many dry

cleaners will be required to find new solvents to replace a widely used cleaning agent called perchloroethylene, or perc, by 2020. As a result, businesses are using a growing array of new methods to clean garments. Wall Street Journal.

Chromium 6 limit in water goal set by Calif. EPA.

Thursday, July 28, 2011

The agency set a public health goal for hexavalent chromium, also known as chromium 6, that will be used by the state's Department of Public Health to help create a legally enforceable limit on the chemical in drinking water. The agency set the goal at .02 parts per billion. San Francisco Chronicle. Researchers examine cumulative health risks.

Wednesday, July 27, 2011

New Bedford residents, like those in many cities, are at risk for high rates of attention deficit hyperactivity disorder and high blood pressure, according to state and federal studies, and researchers are studying the reasons why. Boston Globe, Massachusetts.

Plant-powered plastics.

Wednesday, July 27, 2011

Chemists are working to reduce the volume of this hydrocarbon-based, hard-to-degrade material that can release potentially toxic ingredients into the environment. Some of the more promising research involves green plants. Science News.

Thalidomide returns: Scandal-hit drug is now used across NHS.

Wednesday, July 27, 2011

Thalidomide, the cause of the biggest medical scandal of the last century, is today recommended for use across the NHS. London Independent, United Kingdom.

CDC still listening to youth-vaccination debate.

Wednesday, July 27, 2011

The CDC recommends meningitis immunizations for children ages 11 to 18 to help prevent the rare but potentially fatal bacterial meningitis. But the recent FDA approval of a vaccine for babies as young as 9 months has prompted federal officials to consider adding it to the other 16 recommended immunizations. Chicago Tribune, Illinois.

[Coalition of health and environmental groups challenges California's pesticide plan.](#)

Wednesday, July 27, 2011

The state's programs often include spraying harmful pesticides, some of which drift onto homes and people. eNews Park Forest, Illinois. [See another article related to pesticides: [Contaminated wells lead to lower assessments on DeLand properties](#)]

Lessons Learned

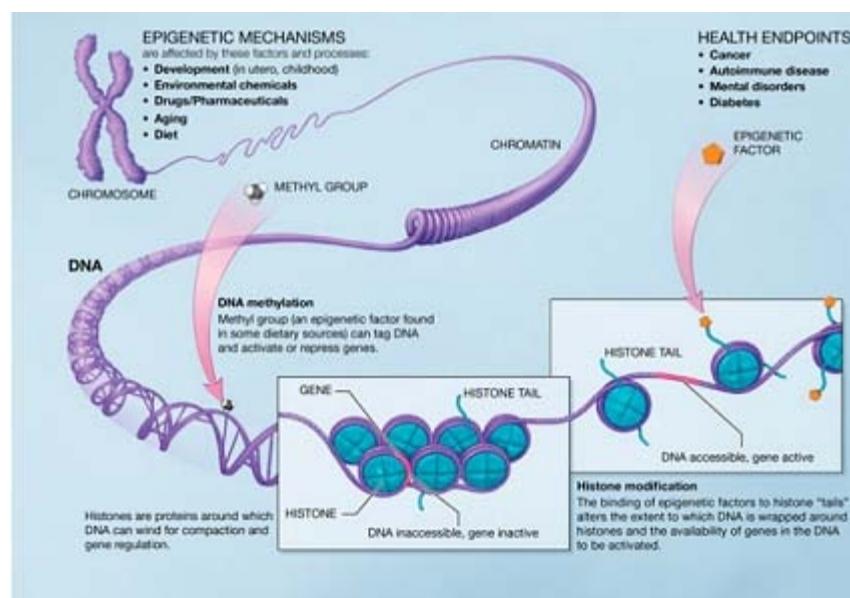

Epigenetics - The Genes but More

by Steven G. Gilbert, PhD, DABT

Epi, means "upon", "above", "in addition to". Epigenetics is the study of changes in gene expression caused by mechanisms other than changes in the genetic (DNA) code.

"We recognized in 1996 that, with progress in the field of genetics accelerating at a breathtaking pace, we need to ensure that advances in treatment and prevention of disease do not constitute a new basis for discrimination."

- Olympia Snowe

Source: The National Institutes of Health

The concept of epigenetics, meaning something acting above or in addition to genes, is both old and new. One of the greatest mysteries was how life replicates, adapts, changes, and reproduces. Austrian scientist Gregor Johann Mendel (July 20, 1822 - January 6, 1884) founded the new science of genetics by demonstrating the inheritance of certain traits in pea plants follows particular patterns. Mendel did not know it, but he was

describing the functionality of DNA. Decoding the genome and looking for variations in an individual's DNA was a focus of research to help explain individual variability and susceptibility to disease or toxic effects. We have been accustomed to blaming a lot on "our genes", but then the story became both more complicated and intriguing with the recognition of the subtle power of epigenetics.

Conrad Hal Waddington (November 8, 1905 - September 26, 1975) postulated that it was not just the genes that shaped development but also the environment that shape the genes. In the late 1930s he wrote a textbook describing developmental epigenetics, a term that then meant how the environment shaped genetic activity. Understanding a possible mechanism had to wait for a far deeper understanding of DNA and its role in development. Epigenetics is now defined as changes in gene expression other than changing ("above" or "in addition to") the DNA sequence. Typically gene expression is silenced or suppressed by DNA methylation or histone deacetylation, but without altering the sequence of the silenced genes. These ideas were first articulated in 1975. The power and subtlety of epigenetics is these changes can be passed to the next

Conrad Waddington

generation.

While we are now well aware of the damage thalidomide, alcohol, lead, mercury or PCBs can cause to the developing organism, more subtle epigenetic changes can also result from environmental exposures. A dramatic example of the power of epigenetic information transfer was demonstrated by research on the endocrine disruptive fungicide vinclozolin. Male offspring of the exposed mother rat transferred disease susceptibility to the next generation. Further research has indicated that epigenetic changes can result from exposure to environmental hazards such as cigarette smoke, arsenic, alcohol, phthalates, BPA, and other chemicals. Furthermore, epigenetic changes can occur through nutrition, methyl content of diet, intake of folic acid and vitamins or even social and maternal behavior toward the offspring. This really emphasizes the importance of a loving and supportive environment during development. Epigenetic changes are associated with cancer, neurodevelopment disorders, autoimmune disease, diabetes, asthma, behavioral disorders and other changes.

Our expanding appreciation of the influence of development for epigenetic changes will have profound effects on risk assessment and really argues for a precautionary approach to chemicals during development. We have an ethical responsibility to ensure that our children have an environment in which they can reach and maintain their full potential, free of exposure to chemicals that cause adverse epigenetic changes. In addition, we must move beyond just doing no harm to one of creating a positive and supportive environment for our children.

Looking back to go forward

Lessons Learned is a bulletin feature focusing on an historical event that provides an important lesson for ensuring a more sustainable and healthy environment. Please feel free to send suggestions to [Steve Gilbert](#).

Past Lessons Learned: <http://toxipedia.org/x/06Jb>

The Collaborative on Health and the Environment offers this information as a service but does not endorse any of the events, articles or announcements.

Companion bulletins are available for different audiences:

- For those interested in general children's environmental health: http://www.healthandenvironment.org/working_groups/childrens_health/bulletins
- For those interested in environmental health in Washington State and the Pacific Northwest: <http://washington.chew.org/bulletins.html>

While there is overlap with this bulletin, there are some events and announcements unique to those bulletins.

If you would like to join the Collaborative on Health and the Environment (CHE) and the LDDI Working Group, please complete the application on the CHE website: <http://www.healthandenvironment.org/application>. Joining CHE means receiving up to four email messages a month from the CHE National listserv. CHE costs nothing to join and the benefit is shared information and opportunities for further engagement, if you choose. Be sure to mark that you want to join the Learning and Developmental Disabilities Initiative Working Group at the bottom of the application.
